What exactly is PayPal?

Answer: PayPal is the world's most popular "middleman service" for online purchasing. Where money grams and wire transfers were the standard in the 20th century, today over 99 million Internet users prefer to use PayPal to send money and receive money. PayPal has become such a convenient and trusted way to transfer money online, 95% of eBay's purchases go through PayPal.

How PayPal Works.

As an online financial transaction broker, PayPal lets people send money to each other's email addresses. At no time will either party see the other's credit card or bank information.

Similar to an escrow service, PayPal acts as the middleman holder of money. Through its policies, practices, and business integrity, PayPal has earned the trust of both parties. With multiple guarantees in place, buyers and sellers entrust PayPal with their credit card and bank information. PayPal keeps that private customer information secret. Then, while "blinded" from the other party's confidential information, strangers safely send money to each other through PayPal and email.

The wrong decision taken by PayPal is that they limit some countries from operating with them for the best reasons best known to them, countries like Nigeria (Can't receive money), Ghana, Pakistan, Egypt, Libya etc.

Let's go straight to the account opening:

Step 1: Get A Dedicated IP Address

In this step we shall be dealing with VPN which means Virtual Private Network

It's a service issued by some providers where you can use your local ISP service to connect to a remote server, get connected and use the IP address issued by them to browse the internet as if you are in that country. For example, if I want to use a US IP address whereas I'm in Nigeria, what I should do is to find a VPN service provider that can give US IP. Pay them some money and get connected. With such service, I can browse the internet as if I'm in US while am in Nigeria or any other country.

There are many VPN providers out there namely:

www.vpnseek.com (\$10 Monthly)

www.worldvpn.com (\$10 Monthly)

www.TopUpGold.com (7,500 Naira Yearly)

I have been using vpnseek and other foreign vpn providers but since I discovered the one been sold by TopUpGold.com which is owned by a Nigerian with excellence service. To get a VPN using Naira visit www.topupgold.com move to their VPN section and place an order, you will be given instruction on how to use the VPN by the provider.

After you might have gotten the VPN, when you are connected, just use any of your browsers and go to www.ip2location.com or www.whoer.net to check the location of your IP now. For example, If I am given Chicago IP, I will connect the VPN and point my browser to any of the above site to verify the IP given to me, if the two IP match with the one given to you by VPN company, you can proceed. With this info, I should get address and phone number from Chicago in US for my PayPal account registration.

Step 2: US bank account for verification

It's now time to get US bank account for verification. If you have a means of getting it, then proceed to the next step. If not, I would suggest that you get a virtual US bank account from www.topupgold.com locate their "Other Service" page, look for US Virtual Bank Account (VBA) place your order and proceed to the next step.

When you order from this site, they will also give you information on how to use it .

Remember some countries' PayPal account doesn't need a bank account for verification. You may be required to use a credit or debit card for such purpose and the same site above can give you a VISA card. Visit www.topupgold.com to get Virtual Credit Card for verification

This is the site I get my tools from and since my business with them they never fail me, that is why I suggest you try their service.

Step 3: Generating Password, Address and Phone Number

Don't use common password for your PayPal account. Use this site: www.StrongPasswordGenerator.com to generate strong password.

This online software is superb for creating sophisticated passwords that are hard to crack/guess.

Strong Password Generator

Use this strong password generator to generate secure, random passwords. It's free.

Strong Password Guidelines

A strong password:

- has at least 15 characters;
- has uppercase letters;
- has lowercase letters;
- has numbers;
- has symbols, such as ' ! , ? \$ % ^ & * () _ - + = { [] } : ; ' ~ # | \ < , > . , ? /

This site is where we generate addresses and phone numbers. We call it www.FakeNameGenerator.com

With this site, you can select the gender, name set and country you want to generate names, addresses and phone numbers to be used in your PayPal account.

NB: Use your real names for the PayPal account and make sure you write down or print the details you got from fakenamegenerator.com

Leonor E. Ashley
4142 Fairfield Road
Newburg, WI 53060

Phone: 262-675-4417

Website: WomenAlert.com

Email Address: LeonorEAshley@teaworm.com
This is a real email address. Click here to activate it!

CAUTION: If your dedicated IP is located in Chicago find address located in any city in Chicago, this is to enable authenticity of your account. When you have gotten details from any of the city in Chicago write them down or print it out for future use, the details will be used to open any account you will use PayPal as means of payment so that your PayPal detail will match that of the site you want to make payment to, this is to avoid PayPal suspecting you. Lets assume my VPN is pointing to Santa Rosa California, my address and phone number will also be pointing to the same location (Santa Rosa California USA). I will emphasis more on this later.

Now we have gotten our tools let's move to PayPal account opening.

NB: Due to some recent development, its advisable to add a valid US phone number on your PayPal account. This will fasten the process if you have any issue with your account. There are many companies offering US Virtual phone number but the best to use is number gotten from Google voice (Only for US and Canada).

If you have anyone in US, they can assist you to get one or you visit www.TopUpGold.com, they also provide the service. They will get any destination for you for a fee.

Remember to get the number from where your IP is pointing to.

Read about Google Voice number here >

http://google.about.com/od/socialtoolsfromgoogle/p/what_is_google_voice.htm

Step 4: Creating A PayPal Account

In this report, I will be using Mozilla Firefox as my browser. So, first and foremost, remove flash cookies, cookies and cache from your browser.

To do this on Mozilla Firefox, click on Tools, then Clear Recent History, select Cookies and click on Clear Now. If you are using

Internet Explorer, then click on Options, then Internet Options, then General, then click on Delete under Browsing History and click Delete All.

To clear flash cookies open the control panel locate flash player and open click on storage click > Delete All, a window will popup click on delete data. Now you are ready to follow the next step.

After clearing cookies and cache, make sure the VPN is connected and check through www.ip2location.com to confirm the IP location. If you are satisfied, type www.PayPal.com in the browser address bar and click Sign up button when the page opens.

Then select Premium or personal account.

Remember, am opening US PayPal account and I'm using a dedicated Texas VPN IP address. I also clicked on Premium. That was the reason United States appeared in the screenshot below.

After clicking on Save button, now click on **Overview** tab to get to My Account page.

The screenshot shows the PayPal 'My Account' page. At the top, there's a navigation bar with 'Log Out', 'Help', and 'Security and Protection' links. Below this is the PayPal logo and a secondary navigation bar with tabs: 'My Account' (selected), 'Send Money', 'Request Money', 'Merchant Services', and 'Products & Services'. Under 'My Account', there are sub-tabs: 'Overview' (selected), 'Add Funds', 'Withdraw', 'History', 'Statements', 'Resolution Center', and 'Profile'. A welcome message 'Welcome, [redacted]' is followed by account details: 'Account Type: Premier', 'Status: **Verified**' (highlighted with a red arrow), and 'Account Limits: [View Limits](#)'. A box displays 'PayPal balance: \$0.00 USD'. Below this, a section for 'My recent activity' shows 'Payments received' and 'Payments sent' links, with a red 'Account Verified' banner. A table titled 'My recent activity - Last 7 days (Dec 4, 2011-Dec 11, 2011)' is shown, but it contains no items, displaying '-No New Items-'. To the right, a 'Notifications' box lists links like 'Confirm PayPal Mobile', 'Add a home phone number', and 'Policy Updates'. At the bottom, there are links for 'About Us', 'Contact Us', 'Legal Agreements', 'Privacy', 'Fees', and 'Site Feedback'. A footer note mentions 'Waiting for secure leadback.advertising.com...'.

Congratulation! Your account is VERIFIED

Step 5: Funding Your PayPal Account

Now that you have a functional and accessible PayPal account, it's time to fund it and start making payments/shopping online.

To fund your PayPal account visit www.topupgold.com Create an account and follow the procedures there.

Step 6: Making Payment Online With Your PayPal Account

Before opening/accessing your PayPal account, make sure you have cleared all cookies on your browser and flash.

The same thing is applicable when making payment online with your PayPal account.

To do this on Mozilla Firefox, click on Tools, then Clear Recent History, select Cookies and click on Clear Now. If you are using Internet Explorer, then click on Options, then Internet Options, then General, then click on Delete under Browsing History and click Delete All.

More so, if you have two PayPal accounts, after visiting one, make sure you have cleared the cookies before going to the second account. To clear flash cookies open the control panel locate flash player and open click on storage click > Delete All, a window will popup click on delete data. Now you are ready to follow the next step.

If you want to pay for a digital product like eBook with your PayPal account, first clear your cookies/cache and launch VPN. Check the IP address. If ok, go to the url of the site you want to make payment. Click on Buy button and select PayPal as your payment option if there are other means. PayPal will lead you to where you will add your PayPal email id and password. Put your details and login. If you have enough balance for the purchase, click on Pay Now button, make payment and return to merchant for instructions on how to download and you are done.

Step 7: Withdraw Your PayPal Funds

To be honest with you, opening an account is not the problem but withdrawing it. The best option is to sell your fund to someone that needs it and get paid through local currency. Visit www.topupgold.com they buy and sell funds.

Step 8: Renewing Your VPN Account

When your VPN subscription has expired and you want to renew it, the VPN provider will give you details on the expiration date.

Step 9: Very Important Tutorial On How To Avoid PayPal Limitation

Here comes the real deal, opening PayPal is not the problem but keeping it safe from limitation is where the problem is.

Now read the other package that comes with this manual on how to avoid PayPal limitation.

Before opening/accessing your PayPal account, make sure you have cleared all cookies on your browser and flash.

The same thing is applicable when making payment online with your PayPal account. To do this on Mozilla Firefox, click on Tools, then Clear Recent History, select Cookies and click on Clear Now.

If you are using Internet Explorer, then click on Options, then

Internet Options, then General, then click on Delete under Browsing History and click Delete All.

Listen PayPal tracks your movements through cookies. If you have visited their site before with a Nigerian IP for example, their powerful software will record it. When you change your IP and goes back to their site, there will be conflict which will trigger their security to limit your account.

Don't Login and Logout of your PayPal account often. Even though you have all the tools to nail PayPal, it's not advisable to visit your account often. It's not payza.

If you are expecting funds, don't login to your account. Check your email. If you are paid, you will see the email alert.

Don't use your PayPal for MLM or Gambling or Pornography. Also, if you are using Nigerian address, don't use PayPal account to pay big time hosting providers like Hostgator, Godaddy, etc. They will ask you to provide your ID and there will be conflicts in your address here in Nigeria and address in your PayPal account. Preferable to pay using Visa Card or Master Card.

Now is the reason why I told you earlier to keep the details you generated from www.fakenamegenerator.com you can only make payment with big hosting companies like Hostgator.com, Godaddy.com and the rest, you must use the same details you used when opening your account so that it will match with that of PayPal, but if you have already opened the account before PayPal, I advise you

to open another account with the details you used when opening your

PayPal account and also use dedicated IP to access any account related to your PayPal account.

If not forget about it and go for master card solution.

CAUTION: Never use one dedicated IP for more than one account.
One IP one account.

I think with the above procedures you can own a verified and accessible/functional foreign PayPal account in any country banned by PayPal

Once again thanks for ordering this report!
