

Latest Method Of Carding 2021

This carding method is easy and straightforward to do on any online shopping site (<https://toolzstore.ru> Best site for valid cc and other tools), you just have to buy a valid cc and viola! you can start carding

1. Create an email account with a CC matching name.
2. Now Run Remote Desktop Connection and connect with your RDP Host. But if you are not using RDP, then follow the below steps...
3. Run MAC address changer, change all MAC addresses.
4. Run CCleaner. Analyze and clean.
5. Set socks5 in Mozilla firefox. I believe I explained that already, scroll up if you didn't read it.
6. Now Restart Firefox and go to Whoer.net and check if your IP is blacklisted or not and is it the same as CC holder address.
7. Now open any shopping site. I will recommend a shopping site in your country. Why? Because you don't need to wait a lot to get your package
8. Now register with credit cardholder information, name, country, city, address, and email you made one just for this order.
9. Choose your item & add it to the cart. Never choose a large amount of items first.
10. In shipping address enter your address or your drop address, where you want to deliver the product.
11. Go to the payment page, choose Credit Card as a payment method
12. Enter your CC details. Like CC Number, CC holder name, CVV/CVV, Exp. Date. Don't copy & paste info. Type it one by one. Cause most sites have copy-paste detector script.
13. In billing address enter CC holder address. Now proceed to payment.

I am sure if you do everything right, then the order will be successfully placed.

Wait for orders to arrive at your shipping address. When they arrive the courier boy will call you.

Incase they ask for any ID card, you can make a fake ID card.

NOTE: Don't follow does shitty guide out there saying, you need to get something of low price, before making orders of high price products, it's a crazy guide, it will only make your cc get blocked.
