

Basic Carding for Noobies

By this article I hope most of beginners will find answers of their most main questions. So at first we should understand how it is. As in any work it has its order and chain – if you'll enter card in any place you see you won't get stuff. Mainly this chain includes two people – who card the stuff and who this stuff accept. For the beginner do this both thing by himself is almost unreal. So let's explore it deeper.

First we must find online-shop where we will order stuff. Don't try to get plazma TV for 10k first. There are many reasons you won't be able to card it. Choose the stuff like not expensive laptop or photo camera cheaper \$1k-1,5k – that's optimum for the beginning. Further take the card – there are many people who sell it – it's out of our article. After you've bought card we need to prepare it. We can't order stuff on holder's address and we don't need it. We'll order stuff to drop – a person who'll accept the stuff (read more about it in another articles). For example you've bought such card:

5494096990700437 Amber Zellweger 017 03 2011 53 Kinne Road Glastonbury CT 06033 US 860-430-9077

Let's separate info we got:

name_on_card= Amber Zellweger

address1=53 Kinne Road

city= Glastonbury

state=CT

zipcode=06033

country=US

card_number=5494096990700437

exp_month=03

exp_year=2011

cvv2=017

Further we need to make enroll of this card. We need SSN (Social Secure Number), MMN (Mother's Maiden Name), DOB (Date of Birth) for it – different banks request different info. Some of them can also request DL (number of driver's license) or PIN number. So we don't need to pass such secure like PIN requesting. And another info we can look up on special services (usually one-time of it's using costs \$1-\$2). We need also to know bank-emitent (bank which has made the card) – for this e look on BIN (first 6 digits of card number) and find in special programs (CC2Bank, Mars Data Bank) or in another BIN databases which bank it belongs to.

So we got needed info. Let's start to make enroll. We go on this bank's site. Then find there enroll-register option, enter all data we're asked, Now we have online access to our card. That what we call enroll. We can look for balance of card here (it must be in 2-3 sizes more than we're going to spend) and also look for general option – address changing.

Usually you can change Address, City, State, Zipcode and Phone number. Change it on your drop's data. Except phone number – we need to have our own number (because shop can call to it and we must avoid any problems with it). You can own it using different IP-phone services (find in google). Now after we've changed data we must wait some time for approving changing (time of waiting is different in different banks).

So card is ready. Let's check it – but we should check it. Try to buy some cheap shiet like soft or chocolate or smth like this – if payment was successful – we can do the shopping! (use name, card number, exp and cvv of CARDHOLDER, and new address we enter in enroll account.

Now is final. Register in our online shop and order the stuff. Choose the fastest delivery method. So we have the same billing and shipping addresses – you know why already). After ordering – wait for shop's reply. You can be asked for call or documents – better use profession call and painting services to resolve these problems. If all will be good, you'll receive track number – it's number which you can enter in delivery service you've chosen and trace your parcel.

The last you can do – tell about it to your drop (drop-service) and wait.
