You need strong sock5 (clean)
And a strong internet (i recommend vps or rdp) cuz if processing of payment is timed out, and you finally login, it will request for card confirmation and cancel and go back to ebay.
so what you will do is, create an ebay acc, and make your drop address a primary add.
then verify your email, and add a card.
make sure email addy is alike with cc name
then, you make sure you clear all cookies/cache etc.,everything
and select item wanna buy.
checkout as guest.
enter drop address
then it redirects you to paypal.
select "i dont have an acc"
then it will bring a CC form
enter your cc info
then it will tell you there is a matching inf
it will locate your acc and ask if you wanna login to pay or proceed to checkout.
you will select proceed to checkout without login
then you get a Thank you page
and redirected to Paypal.
that's it
you are done
enjoy carding bro
but the setback here is, you need to get cards that are not already linked to US!
