

# **CVV to Paypal v1.1**

## **Beginner's CVV to PayPal v1.1**

The premise of this method is to purchase gift cards from retailers that offer voucher + PIN to be used as “good as cash” within [This](#) payment system.

---

For the purposes of this guide we use [Here](#) as the gift card vendor and [Here](#) as the exchange broker.

[Toys R Us](#), [Eastern Sports](#), [Barnes and Noble](#), as well as many other retailers offer gift cards with PIN.

You may choose to use the gift card like cash with select retailers using [This](#) network, such as Private Internet Access.

You may choose to scale the operation up and receive hard copy checks. If you choose to sell vouchers from a high end retailer, say, Frontier Airlines you must have a drop address but you will have a hard copy check in any name you choose assuming there hasn't been a chargeback. Hard copy checks require ID scans

You will need the following --

- 1) Aged, verified PayPal that you control.
- 2) Email accounts that you control
- 3) Created CVVs from the general area of your PayPal account
- 4) RDP based in US.

Purchase an electronic gift card via the Bass Pro Shops website. Use clean SOCKS/RDP/VPN and be sure to clean your cache before each time you even visit the site. Use BleachBit. Do not go above 150 dollars for any transaction. Only use guest checkout. Never use the same email twice.

Use an email provider that is not immediately recognized as “free”, such as Outlook

Email delivery should take approximately 1-2 hours if your card was approved. You may or may not receive an email confirmation if your card was declined. If you have been waiting for 6 hours on a slow shopping afternoon in the US, your transaction may have been declined on the backend processing.

Once you have the email with both your card and the PIN, go to [Here](#) and create an Personal account. You are not eligible to be a bulk seller yet.

---

Choose "Sell your card".

Choose "[This](#)" as the merchant and enter the value of the card. You must explicitly choose that you have the PIN or else you cannot cash out via PayPal and it will default to hard copy check. You should expect 112 USD returned for every 150 gift card sold.

Choose to receive funds via PayPal and confirm that you will provide the code online instead of mailing it. (again)

Use the credentials of your clean PayPal account to cash out the card. Just enter the credentials and confirm.

You must provide a card to charge in case the funds are reversed from within [here](#) Use the same CVV as you used to purchase the original gift voucher. Work within a few hour window you should be fine. A single dollar hold is placed on the card while the validity of the Bass Pro card is checked. They are not related. You may use another card if you have to.

You should receive a confirmation email once the gift voucher has been validated. The recipient will then receive a confirmation once the funds are released into PayPal. If all goes well you should have the funds in your PayPal no more than 4 hours after the original purchase of the Bass Pro voucher.

Some retailers will use telephone verification before releasing the PIN of the gift card. You'll receive email confirmations but it will seem as if the

PIN wasn't delivered. Use a Google Voice number checkout to handle this problem if and when it happens.

---

It is wise to create a PayPal account at least two weeks prior to any activity whatsoever. Don't try to use the account the same day you created it.

It would be a shame for your funds to be limited or locked after all that trouble. Use a single PayPal account for no more than 3-5 gift card exchanges. That is 3-5 separate gift card exchanges with several gift cards "stacked" within each exchange.

Keep a rolling schedule to maintain a quota that you've set for yourself and stay disciplined enough to keep to the schedule or else you risk your accounts getting limited.

Verified PayPal accounts are available for purchase through BuyVCC.com

You may choose to stack your vouchers in a middleman account and use a cashout account based outside of the US. You may create a digital download product on Sellfy.com to cloak the PayPal to PayPal transfer as a transaction rather than using the dashboard.

---

Creating free virtual server instances (RDP) within Amazon Web Services.

We are specifically interested in Amazon EC2. We can do the following within the free introduction period--

Elastic Compute Cloud (EC2)

▯ 750 hours of Amazon EC2 Linux† Micro Instance usage (613 MB of memory and 32-bit and 64-bit platform support) – enough hours to run continuously each month\*

▯ 750 hours of Amazon EC2 Microsoft Windows Server‡ Micro Instance usage (613 MB of memory and 32-bit and 64-bit platform support) –

enough hours to run continuously each month\*

▯ 750 hours of an Elastic Load Balancer plus 15 GB data processing\*

▯ 30 GB of Amazon Elastic Block Storage, plus 2 million I/Os and 1 GB of snapshot storage\*

All that is required is an Amazon account that has never signed up for AWS.

You are met with the entire list of AWS product offerings. We are only interested in EC2.

You may create server instances in the following regions, or, as Amazon calls them, Availability Zones--

US East (Northern Virginia) Region us-east-1

US West (Oregon) Region us-west-2

US West (Northern California) Region us-west-1

EU (Ireland) Region eu-west-1

Asia Pacific (Singapore) Region

Asia Pacific (Sydney) Region ap-southeast-2

Asia Pacific (Tokyo) Region ap-northeast-1

South America (Sao Paulo) Region sa-east-1

\*\*\* Not all AZs have instances available for the free usage tier. Check before committing to change.

Within the main EC2 dashboard you will see a large blue button for "Launch Instance". This is where we are going to configure and launch our Windows Server.

Choose the following towards the bottom of the list of Operating Systems  
--

Microsoft Windows 2008 R2 SP1 Datacenter edition, 64-bit architecture.  
[English]

You will see that it is marked as "free tier eligible". Select this instance and confirm it as t1.micro so we are launched within the free usage tier.

We are reminded again by Amazon that will not be charged for this instance-

Micro instances are eligible for the AWS free usage tier. For the first 12 months following your AWS sign-up date, you get up to 750 hours of micro instances each month. When your free usage tier expires or if your usage exceeds the free tier restrictions, you pay standard, pay-as-you-go service rates.

Most people can simply click review and launch. You don't need a VPC just for RDP hosts. Those who want to use VPN tunnels will need to create at least one VPC. You'll know if you are one of them.

Check that port 389 is open for RDP on the security group settings and you're ready to launch. You will need to create a key pair to decrypt your password for the initial connection. (or not, it's up to you) Follow the directions on the key pair creation screen and be sure to save it locally on your machine, somewhere safe.

A key pair consists of a public key that AWS stores, and a private key file that you store. Together, they allow you to connect to your instance securely. For Windows AMIs, the private key file is required to obtain the password used to log into your instance. For Linux AMIs, the private key file allows you to securely SSH into your instance.

So you need the key pair to decrypt your Windows Admin password for the first connection or to use with SSH as either .pem or .ppk.

Confirm everything again and click launch. Give your instance about 30-40 minutes to spool up completely. Virtual Windows environments can be tricky the first time. If you are having seemingly weirdo issues with no explanation, just blow away your instance and create a new one. Remember the free usage tier is based on a collective number, not single instances.

When your instance shows the green indicator mark and you see it is running, choose connect. Enter the key that you just created to decrypt your Windows Admin password. Copy your credentials into Notepad.

Click Start -> Run > mstsc

Expand options. Enter your credentials and choose to save the file on your desktop. Now you have a shortcut directly to your RDP.

You can create as many as you want, all around the world, just stay within 750 hours or you will be charged.
