

# **Easy \$500 Wells Fargo Cash Out Method**

**January 8, 2015**

This method will take about one week to complete. You will need the following:

1. Hacked bank account (Wells Fargo works well )
2. An email account
3. Paypal account
4. [AN](#) account (or any internet bank account)

First off get yourself a hacked bank account from somewhere. Even though this is a small cash out amount, buy a larger balance account around \$5,000. People with plenty of cash in the bank tend to check up on it less often. You do not need to enter the actual account.

Open an account [HERE](#) and add the bank account using the username/password. This will:

- 1.) check if the account is still live,
- 2.) let you see the balance of the accounts, and
- 3.) if needed, let you check for deposits from PayPal, as well as to keep an eye on it.

Research the background of account holder and get their SSN from [HERE](#) (see “Background and Credit Report” guide)

Open PayPal account or use an existing one you have and add the bank account. Some states let you add automatically using the username and password which will verify the account right away. I know FL, CA and TX work among many others. Otherwise you will need to go into the account [HERE](#) and find full account number and routing number from the online statements. (see “How to find full WF bank account number” guide)

Open an account [HERE](#) and add to the PayPal account also. It can be in any name but make sure you know everything about the [AN](#) account holder SSN/address history/relatives etc. You will need it later. (see Background and Credit Report Guide)

While logged in to the PayPal account, transfer \$500 from the target's bank account to the PayPal (add funds to PayPal). Take a note of the IP address you use, your MAC address and browser configuration for next time. This will help ensure your account doesn't get locked out. Next, wait a few days for the funds to land. Go back in to PayPal using the IP, MAC and browser from last time and withdraw the funds to the AccountNow account.

Rinse and repeat the method until you are stopped/flagged. You will need to get the \$500 a month PayPal withdrawal limit lifted if attempting again. You might have to call PayPal and provide docs to verify identity. In my opinion, it's easier to just start over from the beginning with new accounts.

### ***Now How To Cash Out AccountNow***

You can send funds using MoneyGram from within [AN](#) which takes 10 mins but you need ID to pick up cash and it's probably not a good idea to send it to yourself. You can also open an account [HERE](#) and buy BTC with MoneyGram easily enough. Sometimes localbitcoins has people accepting MoneyGram but make sure they don't require you to physically visit MoneyGram location. To send money through MoneyGram you will need to pass some ChexSystems verification questions on the [AN](#) account holder so this is where the research comes in. (see Background and Credit Report Guide)

Good luck.
