

Short tut, on how to make track one with track 2.

Take example of last dump Track2 (this is a dump):

Example dump info: 4888603170607238=15051011203191805191 PATACSIL/DAVID Bank  
of America, N.A. (USA) CREDIT PLATINUM United States of America

of Track 2)

Smith/John <---the name of the card holder (LASTNAME/FIRSTNAME)

Bank of America, N.A. <-- Bank Name

(USA) <--- Country of Bank

CREDIT <-- Credit or Debit ( in this case it is Credit)

PLATINUM <--type of card, eg. Classice, Gold,Platinum

United States of America <--Country

When you see and equal sign (=) in a Track it always means it is Track 2

When you see the letter "B" in front of the Track it is always Track 1

Now to Make a Track1 From Track2 see instructions below:

Take the Credit Card account number from Track 2 in this example it is:

4888603170607238

Add the letter "B" in the front of the number like this:

B4888603170607238

Then add the cardholder name YOU want to show on the card

B4888603170607238^Smith/John^(Last name first/First Name)

this case the 3 digit service code is 101 so add 1505101):

B4888603170607238^Smith/John^1505101

Now add 10 zero's after service code:

B4888603170607238^Smith/John^15051010000000000

Next add the remaning numbers from Track2 (after the service code):

B4888603170607238^Smith/John^150510100000000001203191805191

And then add six zero's (6) zero's:

B4888603170607238^Smith/John^150510100000000001203191805191000000 this is  
your Track 1

Track 1: B4888603170607238^Smith/John^150510100000000001203191805191000000

REMEMEBER THIS IS ONLY FOR VISA AND MASTER CARD(16digits) , AMEX HAS 15  
DIGITS, this doesn't work for Amex
