

This guide is a trick on how to card gift cards with method 2021.

This tutorial tends to touch all the areas you might want to understand better. If you should take your time and read through this guide, you will become a pro in carding within some period of time.

Although Carding is not the best way of cashing out CC, I have made a simple guide on how to buy bitcoin with your Credit/Debit card.

On this post, I will be guiding you on how to Card Amazon Giftcard. This is the method I use personally but have decided to share the idea with you all.

### **\*What do I need to Card Amazon Gift Cards ?**

- Fresh CC from any shop or a trusted vendor (<https://toolzstore.ru> Best site for valid cc and other tools)
- RDP or 911.re VPN
- Jet Cleaner/CCleaner pro
- A fresh Email Address
- Old Amazon Website

### **\*METHOD \***

If you have gotten your CC, then you are ready to start work.

Connect RDP/911.re VPN.

Note, you must connect to the IP address same as the state of the owner.

**Example:** if you are using CC and the owner is from New Jersey, use New Jersey IP address.

Then, clear your history and cookies. There are tools out there to help you clear your cookies. I personally use ccleaner pro and jet cleaner

Another step is to create an email address. It will be suspicious to use a disposable email, I will suggest creating an outlook email address.

Use the same name with the one on the cc you are carding. E.g. if the name in the credit card is Ludec team , go to outlook and create an email like ludecteam@outlook.com.

Having followed the procedures above, you are almost close to the promise land.

Now is the time to login ur old Amazon account.

Link the cc to Amazon and cart a product below \$50, leave it for some hours before check out If you rush it, they might cancel your order and return the fund to the owner.

After 48 hours, login to Amazon with the same IP address.

Check out the carted product. Be sure to type billing address as shipping address and it should be the real address of the cc owner.

This simply means that you are buying stuff for the owner. It will look real and Amazon will confirm your order almost immediately.

Once confirmed, your Gift Card Carding is almost complete.

Now, visit Amazon e-giftcards and choose e-gift card amount below \$500.

Mail the gift card to your email address which is the outlook you created.

After you have gotten the gift card, you can exchange it for bitcoin on [localbitcoins.com](http://localbitcoins.com) or [paxful.com](http://paxful.com)

That's all. Its that simple all you need is a valid CC.
